| Office Action Summary   | Examiner  | Art Unit     |  |  |  |  |
| · · · · · · · · · · · · · · · · · · ·   | Anu Ramana  | 3732         |  |  |  |  |
| The MAILING DATE of this communication app  |   |              |  |  |  |  |
| Period for Reply  |   |              |  |  |  |  |
| A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.  - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.  - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.  - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.  - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).  Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b). |   |              |  |  |  |  |

#### **DETAILED ACTION**

## Specification

The disclosure is objected to because of the following informalities. In the paragraph on page 13, at line 24, the concave inner periphery should be "74" instead of "72" to be consistent with Applicants' disclosure.

Appropriate correction is required.

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 21-23, 25-26, 28, 30, 32-33 and 35-38 are rejected under 35 U.S.C. 102(b) as being anticipated by Williamson et al. (US 5,925,077).

Regarding claims 21-23, 25-26, 28, 30, 32-33 and 35-38, Williamson et al. disclose an acetabular prosthesis or cup 10 having a convex surface 22 and a concave surface 20 with portions, each portion 86 being defined by a planar first surface spaced inwardly from the convex surface 22 and a planar surface spaced inwardly from the concave surface 20 (col. 1, lines 7-12, col. 4, lines 10-37, col. 5, lines 43-67 and col. 6, lines 1-12, Figures 3, 10 and 14I).

The method steps of claim 36 are inherently performed during normal use of the prosthesis 10 of Williamson et al. for the purpose of replacement of the acetabulum or hip socket due to bone disease or severe fracture (col. 2, lines 23-37).

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person

Application/Control Number: 10/082,957

Art Unit: 3732

having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 21-40 are rejected under 35 U.S.C. 103(a) as being unpatentable over Jones (US 5,370,702).

Regarding claims 21-40, Jones discloses an implant or prosthesis or cup 10 having a convex surface 20 and a concave surface 18. Recesses or "portions" 14 are provided spaced from the convex and concave surfaces; each recess having sidewalls 21, 22a with a removable portion 32, 32a about 0.005 to 0.5 inches thick; the removable portion 32, 32a having a first surface spaced inwardly from the convex surface 20 and a second surface spaced inwardly from the concave surface 18 with grooves 24 extending inwardly from the second surface to the first surface. Jones further discloses that punching may be applied to remove portion 32, 32a to form a hole in cup 10; the hole being used to fasten cup 10 by a bone screw or other fastener (col. 1, lines 8-24; col. 2, lines 14-38 and line 68; col. 3, lines 1-3, lines 13-23 and lines 37-49 and lines 57-64; col. 4, lines 8-47; Figures 1 and 5).

Jones discloses the claimed invention except that the first and second surfaces of the removable portion are "substantially planar." It would have been an obvious matter of design choice to one skilled in the art at the time the invention was made to the removable portion with a "substantially planar surface", since applicant has not disclosed that a "substantially planar surface" solves any stated problem or is anything more than one of numerous shapes or configurations a person ordinary skill in the art would find obvious for the purpose of providing a removable portion in an acetabular cup. *In re Dailey and Eilers, 149 USPQ 47 (1966)*.

Regarding claims 23, 30 and 38, Jones discloses that recesses 14, 14a can have any shape depending on the configuration of the fastener that is used (col. 3, lines 44-49).

Accordingly it would have been obvious to one of ordinary skill in the art at the time the invention was made to have provided cylindrical walls to the recesses 14, 14a, in order to place a cylindrical fastener.

Regarding claims 25 and 32, Jones discloses that acetabular cups typically include a liner into which the femoral head fits (col. 1, lines 13-23). It is well known that a femoral head is supported by and operably connected to a stem.

Art Unit: 3732

Accordingly it would have been obvious to one of ordinary skill in the art at the time the invention was made to provide a stem, a femoral head operably connected thereto and a liner positioned between the acetabular cup and the femoral head for replacement of the hip socket.

The method steps of claim 36 are performed during normal use of the prosthesis or cup 10 of Jones for the purpose of replacement of the acetabulum or hip socket due to bone disease or severe fracture (col. 1, lines 13-15).

Claims 24 and 31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Williamson et al. in view of Jones (US 5,370,702).

Williamson et al. do not disclose that ledge 86 has a thickness of 0.10 inches or less.

Jones teaches a removable portion having a thickness of 0.005 to 0.5 inches for ease of removal by applying a pulling or bending force (col. 3, lines 50-64).

Accordingly it would have been obvious to one of ordinary skill in the art at the time the invention was made to have provided the a ledge 86 in the Williamson et al. prosthesis, as taught by Jones, for ease of removal of ledge 86.

#### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Anu Ramana whose telephone number is (703) 306-4035. The examiner can normally be reached Monday through Friday between 8:00 am to 5:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kevin Shaver can be reached at (703) 308-2582. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
